PALAK GUPTA, FOUNDER

Why I built it on a Google Sheet. And not as a product.

SWIPE →

THE CHOICE

I could have built an app

When I designed a work system for my family's firm, I built it on the firm's own Google Sheet instead. Three reasons.

ONE

The data stays with the owner

If I disappear tomorrow, the sheet is still theirs, in their account, in a form they can use.

TWO

Nobody learns a new tool

The team already opens Sheets and WhatsApp every day. The system meets them where they are.

THREE

It keeps me honest

If it is not useful this month, the owner can close the door and keep everything. It has to earn its place.

THE WRONG WAY ROUND

Most software keeps your data

It keeps your data in its own system and sells you access to it.

WHAT YOU PAY FOR

The sheet is the easy part

What a firm pays for is the follow-up, the weekly score and someone accountable.

Where does your business data live today?

And do you know how you would get it out?
